

EZ-sensor® VS EZ-sensor® 2.0

Coverage roadmap for EZ-sensor 2.0 release

Important notice:

This list provides a percentage evaluation of vehicle coverage for the Schrader's programmable EZ-sensor. This evaluation uses as a baseline reference the vehicle registration data in the analysed region correlated with the penetration fitment data of direct TPMS provided by the vehicles manufacturers in order to estimate the current vehicle car park equipped with direct TPMS in the considered region. Therefore the coverage data provided is to be interpreted as the percentage of the vehicles currently equipped with TPMS in the car park of the analysed region which could be serviced with EZ sensor instead of the Original Equipment sensor if they needed one of their TPMS sensors replaced or if they needed a extra set of sensors for winter wheels. For example saying that coverage in Europe is 90% means that 9 cars in 10 in Europe can be serviced with EZ sensor instead of OE sensors for replacement or winter wheel needs.
